                                                                                                                                                                                                                                                                                                                                                                                                                 City, CA). The frequency distribution of the library is so follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

/clone lib="Mouse Organ of Corti cDNA pBluescript."
/clone lib="Mouse Organ of Corti; Vector: pBluescript: The organ of Corti (OC) was fine dissected from a total of 386 OC as follows: 102 samples from post natal (P) day 5; 72 from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10; 14 from P12 and 24 from P13. After killing animals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fastrack kit (catalog # K1533-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning kit (catalog # 237612), both

from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mENA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an XAD 1 site. First strand synthesis was primed with the linker- primer and transcribed using Moloney mutrine leukemia virus reverse transcriptese (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase, and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with ECOR I adapters in the presence of ligase and digested with ECOR I adapters in the presence of ligase and digested over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400bp and 1000 bp, respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with ECOR I and XND or The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF. cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual CDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTS from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CMCGMAAGCTMAGCTMAGCT) and 25% strandth Pichna PDNA clones were generated with the universal M13 reverse primer (CMCGMAGCTMAGCTMAGCT) and 25% strandth Pichna PDNA clones were generated with the concert96 miles and contained with the contained with the concert96 miles were generated with the contained with the contained with the contained with the concert96 miles and contained with the contained with the contained with the contained with the contained with 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             strength BigDye terminator sequencing chemistry (Applied Biosystems, Poster City, CA). Sequencing chemistry (Applied Biosystems, Poster City, CA). Sequencing reactions were performed on MT Terrad thermal cyclers (MA Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72 of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have thits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."

columns to enrich for CDNAs greater than 400bp and 1000 bp, respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with Gigapak ECOR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance halper phage (catalogue # 21203) was adopted to resistance halper phage (catalogue # 21203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, and growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concerts6(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal MI3 reverse primer (CAGGAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Poster City, CA). Sequencing reactions were performed on MY Terrad thermal cyclers (MN Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Poster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 43% of genes are present in GenBank and have know function; 13% are uncharacterized BSTS and 1 others

reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney wurine lettemta virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Ptu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with Xho I. The CDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400pp and 1000 bp. respectively. The cDNA was then directionally ligated to the UnizAP X vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the vectored library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTB from the 5' end of the CDNA clones were generated with the universal MI3 reverse primer (CAGAAAACAGCTATGACC) and 25% strength BigDye terminator sequencing reactions were performed on MT Terrad thermal cyclers (MP Research, Walthem, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Poster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy, 14.3% 2, 12% 3.10; 1.4% 11-50 and o.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have high in GenBank by our open function; 23% have the sincharacterized ESTS and 20% are unidenti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      73
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21 IlePheMetAspArgLeuAlaSerLysLysLeuCysAlaAspAspGluCysValTyrThr

the Uni-ZAP XR vector, which had been predigested with BCOR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XII Blue MRF. cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual CDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAACAGCTATGACC) and 25% strength BigDye terminator sequencing reactions were performed on M7 Tetrad thermal cyclers (M1 Research, Waltham, M2), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72 of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-16. As to gene function, 45% of genes are present in Genbank and have know function; 23% have whits in Genbank but do not have assigned function; 12% are uncharacterized ESTS and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    409 bp mRNA linear EST 19-JUN-2002

strength BigDye terminator sequencing chemistry (Applied Biosystems, Poster City, CA). Sequencing reactions were performed on MJ Terrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BQ565411 490 bp mRNA linear EST 19-JUN-2002 gi37b12.yl Mouse Organ of Corti cDNA pBluescript Mus musculus cDNA clone gi37b12 5', mRNA sequence.

organ of Corti (OC) was fine dissected from a total of 386 CC as follows: 102 samples from post-natal (P) day 5: 72 from P6: 60 from P7: 46 from P6: 18 from P9: 20 from P10; 14 from P12 and 24 from P13. After killing animals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spital ligament wer removed and the sensory and spital ligament were removed and the sensory and spital ligament were removed and the sensory and spital ligament were removed and the sensory of catalog # K1539-02; Invitrogen, Carlado, CAI, according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Unit-Zap XR vector kit (catalog # 237211, Stateagen) and Unit-Zap XR vector kit (catalog # 237211, Stateagen) and Unit-Zap XR vector kit (catalog # 237211, Stateagen) and Unit-Zap XR vector kit (catalog # 237211, Stateagen) and Unit-Zap XR vector kit (catalog # 23721, Stateagen) and Unit-Zap XR vector kit (catalog # 23721, Stateagen) and Unit-Zap XR vector kit (catalog # 23721, Stateagen) and Unit-Zap XR vector kit (catalog # 237612), both from Stateagen (La Jolla, CA, USA), according to manufacturer's instructions. Britely: 1.5 ug mana was primed with the linker- primer and transcribed using a hybrid oligo-180 dusing a whyrid oligo-180 dusing a whyrid oligo-180 dusing with Xho. I The condensates and digested with Row I The Colle with Pfu DNA polymerase, ligated with Book I adapter of the DNA polymerase and digested over Pharmacia Size Sept00 (Pharmacia, Uppsaa, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNA sequentially size fractionally ligated to the Unit Animacia, Statesgened with Animacia, Suratagened search place of the phage library was estimated to be 11,100,000 recombinants. Stratagened search place of the phage library was estimated or bescue plasmid DNA from the Phages. Upon plating of the phage library and search pl strength BigDye tearninator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MT Terrad thermal cyclers (MM Research, Faltham, MA), and analyzed on 3700 automated capillary sequencers using Pob's polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 7% of genes have 1 copy, 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ProArgAsnLeuValLysGluGlnArgValTyrGlnGluAlaThrLysGluValProThr 120
                                                                                                                                                                                                                                                                    The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and to identify membrane-bound or soluble receptors. The polypeptides, may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the coding sequence of novel human secreted protein #12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated novel secreted polypeptide (I) and polynucleotide (II). (I) and (II) are useful for treating cancer, discases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and psychiatric diseases, cardiovascular diseases, respiratory diseases, renal diseases, or gastrointestinal diseases. These may also be used to expression, production, function and/or metabolism of the genes, as vaccines for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New secreted proteins or polypeptides, useful for treating e.g. cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, cancer

signature analysis, and Sanger sequencing techniques. This expressed sequence tag was used in the assembly of a full-length converse sequence (see AAH26343) encoding a novel human growth regulatory-like polypeptide (GRLP, see AAB2671). The GRLP belongs to the same protein family as growth regulatory proteins, compand melanoma derived growth regulatory proteins precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive protein in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell
                                                                                                                                                                                                                                                                                                                                                                  growth and tumours, including neuroectodermal tumours such as gliomas. The polynucleotides can also be used to design probes and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 426 BP; 119 A; 73 C; 113 G; 120 T; 1 other;

The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atheroselarosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; angiogenesis, cardiant, cytostatic; antiangiogenic; hypotensive; vulnerary; antiarteriosclerctic; PRO agonist; PRO antagonist; trauma; gene therapy; cardiovascular disorder; endothelial disorder; cancer; angiogenic disorder; cardiac hypertropiy, atherosclerosis; hypertension; age-related macular degeneration; arterial restenosis; angina; theumatoid arthritis; myocardial infarction; thromophlebitis; lymphangitis; tumour angiogenesis; breast carcinoma; liver carcinoma; wound healing; chromosome mapping; gene mapping; gene; ss.

One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal

Claim 2; Fig 359; 565pp; English.

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic,
antianglogenic, hypotensive, vulnerary and antiarteriosclerotic
activities, and can be used in gene therapy. The PRO polynucleotides,
cactivities, agonists and antagonists are useful for treating or diagnosing
a cardiovascular, endothelial or angiogenic disorder in a mammal,
c g. cardiac hypertrophy, trauma, cancer, age-related macular
degeneration, atherosclerosis, hypertension, arterial restenosis,
theumatoid arthritis, angina, mycoardial infarctions, thrombophlebitis,
lymphangitis, tumour angiogenesis (such as breast carcinoma and liver
carcinoma) and wound healing. The PRO polynucleotides have applications
in molecular biology, including use as hybridisation probes, and in
chromosome and gene mapping. ABL88259 to ABL88267 represent primers and
probes used in the exemplification of the present invention.

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

AAH26343) encoding novel human growth regulatory-like polypeptide (GRLP, see AAB82671) was subsequently obtained. Human GRLP belongs to the same protein lamily as growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polymucleotides of the invention can be used in the prophylaxity irreatment (including gene therapy) and disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell
                                                                                                                                                                         growth and tumours, including neuroectodermal tumours such as glomas. The polynucleotides can also be used to design probes and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                             Sequence 891 BP; 272 A; 146 C; 214 G; 259 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        80
                                                                                                                                                                                                                                                                                                                                                   DNAS. The MLD proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. The present sequence is that of a novel nucleic acid encoding human growth regulatory-like polypeptide (GRLP, see AAB82671).

The sequence was assembled using human thymus CDNA library-derived Hyseq clone identification number 1637272 (see AAB26341) as seed, using software programs to pull additional sequences from Hyseq's proprietary database containing expressed sequences from Hyseq's proprietary database containing expressed sequences from Hyseq's proprietary database containing expressed sequences?

The predicted protein has a mol wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins, belongs to the same protein family as growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polynucleotides of the invention can diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma celling growth and tumours, including neuroectodermal tumours such as and and an also be used to design probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals. They may also have cytokine and cell proliferation or differentiation activity, stem cell growth factor activity,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ProArgAsnLeuValLysGluGlnArgValTyrGlnGluAlaThrLysGluValProThr 120
                                                                                                                                                                                                                           The present invention describes novel MLP proteins and their encoding MNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing to treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    80

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant extivities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and johrt diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.
